Welcome

Secret to centering anything is CSS. As I enable [scope-css](#) by default, you will need an extra selector.

```
<style>
:global {
  body {
    position: fixed;
    width: 100vw;
    height: 100vh;
    display: flex;
    align-items: center;
    justify-content: center;
  }
}
</style>
```
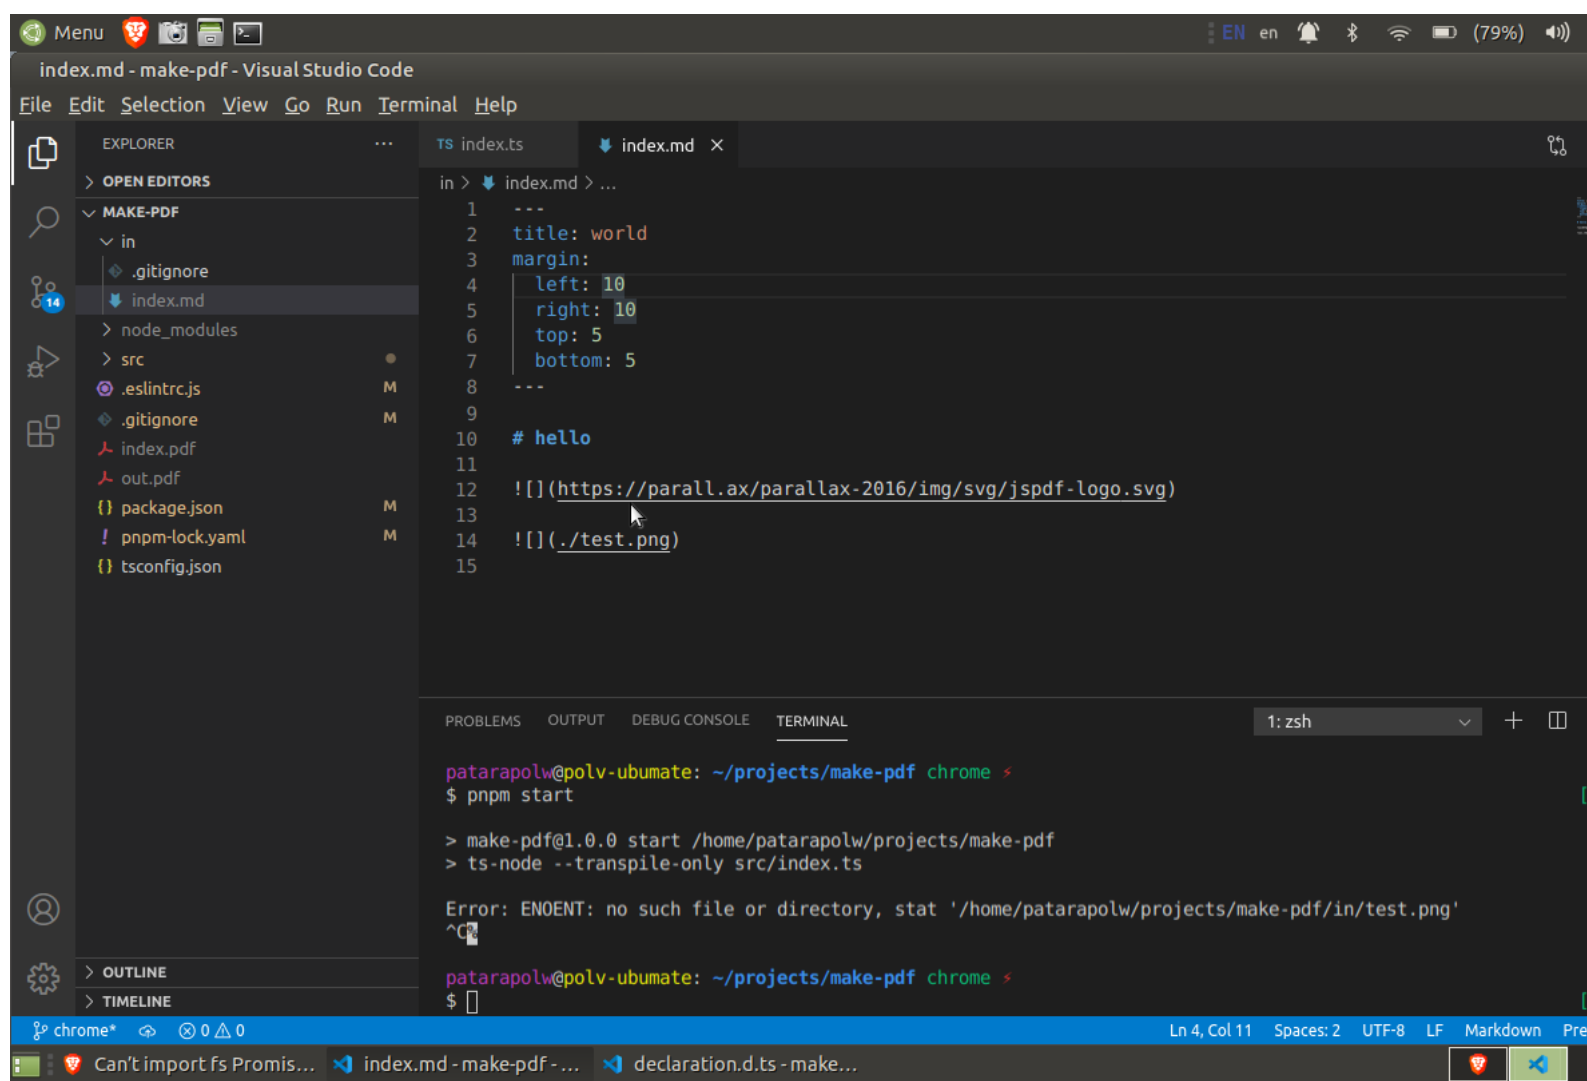

Hello `Hopding/pdf-lib`

This is all possible because of https://github.com/Hopding/pdf-lib.

So, all Node.js dependencies. No [PDFtk](#) (binary) or [pdfbox](#) (Java) for now.

One of the three is required to merge PDF files.

Margin can also be set to `null` to disable margins.

For more options, see https://github.com/puppeteer/puppeteer/blob/main/docs/api.md#pagepdfoptions.

Creating PDF's from markdown

With features that markdown normally won't have.

Page breaks

Page breaks are possible via merging multiple PDF's.

Hello `Hopding/pdf-lib`

This is all possible because of https://github.com/Hopding/pdf-lib.

So, all Node.js dependencies. No [PDFtk](...) (binary) or [pdfbox](...) (Java) for now.

One of the three is required to merge PDF files.

Centering

Secret to centering anything is CSS. As I enable [scope-css](...) by default, you will need an extra selector.

```
<style>
:global {
  body {
    position: fixed;
    width: 100vw;
    height: 100vh;
    display: flex;
    align-items: center;
    justify-content: center;
  }
}
</style>
```

Printing options

Margin can also be set to `null` to disable margins.

For more options, see
https://github.com/puppeteer/puppeteer/blob/main/docs/api.md#pagepdfoptions.
