# Creating PDF's from markdown

With features that markdown normally won't have.

So, I can use LaTeX inside Markdown

YWs

Secret to centering anything is CSS. As I enable scope-css by default, you will need an extra selector.

```
<style>
:global {
  body {
    position: fixed;
    width: 100vw;
    height: 100vh;
    display: flex;
    align-items: center;
    justify-content: center;
  }
}
</style>
```
